DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/22/2003 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3, 6, 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Angal et al. (US 6,298,378).

As set forth in claims 1, Angal discloses a system for providing notifications of computer system events to clients;

Art Unit: 2153

see col. 4, lines 47-64 (these lines describe some of the events for which the system fires off a notification), comprising a central service (the system uses the MIS management information server 104, and the Event Distribution System (EDS) 108) configured to monitor for system events including at least one system event corresponding to whether network connectivity has changed state and to fire event notifications in response thereto (the system notifies the "listeners" in the system when a system has come on-line or gone off-line), including at least one event notification when a network is established, a registrations mechanism for clients to register for notification of one or more types of events; see col. 5, lines 1-41, also see col. 6, lines 31-52, (these lines discuss the usage of a list of listeners who will receive the information, the M IS and the EDS systems can function together in order to filter out and provide the listener with the requested information), including at least one client registered for network connectivity event notification, and a distribution mechanism that communicates a fired event notification to each client registered for notification thereof based on the type of event notification (col.5 lines 27-41), wherein the client registers for notification for a type of event (each of the examples listed on col.4 lines 52-60, e.g. "on-line", "off-line", etc., is a 'type'

Art Unit: 2153

of event), and include condition information therewith and the distribution includes a filtering mechanism for selectively communicating an event notification based on at least one condition (col.5 lines 45-51 "... conditional statements corresponding to events required by the listener").

As set forth in claim 3, Angal discloses a notification which includes activating, starting, or running a program or script (the system will respond to various system notifications, such as an alarm, this will trigger a response that is embodied in a program).

As set forth in claim 6, Angal discloses a system wherein the central service receives at least some of the system events from an operating system (in the list of system events provided by the Angal, at least quality of service alarms can come from an OS, additionally any of the other events discussed in col. 4, can come from the OS of the device connected to the network).

As set forth in claim 8, Angal discloses a system event which includes information related to the logon state of the machine; see col. 4, line 53, (this line indicates that the system notifies other systems when a device has come on-line).

Art Unit: 2153

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Angal et al. (US 6,298,378) and further in view of Marrington et al. (US 4,868,832).

As set forth in claim 7, Angal does not specifically disclose the system event includes information related of the power state of the machine. Angal discloses generally to provide event for equipment alarms (col.4 line 54). It is well known in the art the equipment alarms includes power state of the machine. Marrington teaches a system with power state monitor to generate power state event so as to enable the user to take precautionary action when the system switch to battery power. It would have been obvious for one of ordinary skill in the art to have a power state event in Angal because it would have improved the safety of the sytem to enable user to take appropriate precaution before the power failed.

Art Unit: 2153

Claims 2, 5, and 23-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Angal et al. (US 6,298,378) in view of Gani et al. (The Object Revolution How COM technology is changing the way we do business).

Regarding claims 2, 5, and 23, Angal discloses a central service which is a publisher and clients which are subscribers (listeners) and the registration mechanism and distribution mechanism incorporated within a loosely coupled events database (the MIS and EDS systems).

Angal does not disclose having an event class object. Gani discloses using class objects in a system; see page 108. It would have been obvious to a person of ordinary skill in the art at thetime this invention was made to have provided the system of Angal, with the means for using Object Class language, as taught by Gani. The rationale is as follows: It would have been desirable to deliver information in a faster and more costeffective manner. As Gani teaches the desirability of using an Object oriented system, one of ordinary skill would have been motivated by Gani's teaching to have provided the system of Angal, with an object oriented system, thereby having provided faster means for sending notification of events.

Art Unit: 2153

As set forth in claim 24, Angal discloses a system wherein the client registers for notification of a type of event with the registration mechanism and includes condition information therewith. See col. 5, lines 35-55.

As set forth in claim 25, Angal discloses a system wherein the central service receives at least some of the system events from an operating system (in the list of system events provided by the Angal, at least quality of service alarms can come from an OS, additionally any of the other events discussed in col. 4, can come from the OS of the device connected to the network).

As set forth in claim 26, Angal discloses a computerreadable medium wherein the system information includes information related to a network state (the system indicates whether the system is on-line or not).

As set forth in claim 27, Angal discloses a computer-readable medium wherein the network is a wide area network, and wherein the step of receiving system information at a central service comprises the step of receiving remote access services events; see col. 4, line 48-col. 5, line 15, and see col. 1, lines 46-64 (the system is connected to large networks, such as the internet and therefore operates on that scale).

Page 8

Application/Control Number: 09/256,624

Art Unit: 2153

As set forth in claim 28, Angal discloses a computer readable medium wherein the network is a LAN, and having further computer-executable instructions for performing the step of caching network information corresponding to activity on the LAN; see col. 4, line 48-col. 5, line 15, and see col. 1, lines 46-64 (limited networks are contemplated in Angal).

As set forth in claim 29, Angal discloses a computerreadable medium having further computer-executable instructions for performing the step of evaluating cached network information to determine the state of network connectivity (the system will indicate when the system goes on-line, off-line).

As set forth in claim 30, Angal discloses a computerreadable medium wherein the central service publishes an event
when the state of network connectivity has changed from a
previous value thereof (the system will indicate when the system
goes on-line, off-line).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dung Dinh whose telephone number is (703) 305-9655. The examiner can normally be reached on Monday-Thursday from 7:00 AM - 4:30 PM. The examiner can also be reached on alternate Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenton Burgess can be reached at (703) 305-4792.

Art Unit: 2153

Any inquiry of a general nature or relating to the status of this application should be directed to the Group 2100 Customer Service whose telephone number is (703) 306-5631.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, DC 20231

or faxed to:

(703) 872-9306, (for formal communications intended for entry) (703) 746-7240 (for informal or draft communications, please label "PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA, Fourth Floor (Receptionist).
